

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. APPLN. NO. 09/598,896
ATTORNEY DOCKET NO. Q59609

AMENDMENTS TO THE SPECIFICATION

Please amend the present Abstract of the Disclosure as follows:

31 ~~Method~~ A method for multiple access in a radiocommunication system which avoids forming a ~~signalling~~signaling multiframe with an inflexible turn of transmission. A fixed unit (11-j) broadcasts over a pilot channel a predetermined number of virtual identities for ~~signalling~~signaling which form the ~~signalling~~signaling multiframe, so that when a remote unit wishes to transmit, it selects one of the virtual identities received. The time slots in the ~~signalling~~signaling multiframe are distributed among those remote units (~~12-1 to 12-m~~) which have ~~signalling~~signaling messages to transmit to the fixed unit (11-j).
